

Tecolote Canyon Habitat Restoration Project

Dear Neighbors,

We need your help to restore the canyon.

Wild San Diego (www.wildsandiego.org) is working to restore our portion of the Tecolote Canyon. So far, we have removed ice-plants and successfully planted multiple native species in one section of the canyon. These plants will eventually grow, and in time they will fill the bare spots of the canyon. They will support a variety of wildlife that once lived in this portion of the canyon. For example, the California quail may return from the depths of the canyon if there are enough shrubs and foliage to support it in our neighborhood section of the canyon.

Please consider donating to support our cause. All donations will go towards purchasing native plants for the canyon. Every gallon plant generally costs about \$5. This year, we would love to plant about 50 plants in what we are calling Section A of the canyon (shown highlighted in the map). The cost to purchase all these plants will be \$250. We will plant as many natives plants in the canyon as we are able to purchase with your donations. Once planting in this section of the canyon is completed, we will ensure survival by providing the plants water until they are established. We hope to continue planting in sections of the canyon until it is fully restored.

If you would like to support our project, please consider donating. All donations will be used to purchase plants. Send any amount to our Venmo account **@WildSanDiego**. If asked to confirm, our phone number's last 4 digits are **1884**.

This information is also found on our website at www.wildsandiego.org/donate/.

When asked "What is it for?", you may include your name if you would like to featured as our donor.

Thank you,
Ria (high school student and
founder of Wild San Diego)
